Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 10 May 2007.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 22, drawn to a computer-readable medium including program instructions executing on a computer for licensing external processes on a server, the program instructions performing the steps of: generating an electronic license by formatting a customer order for a software product in accordance with a schema for the electronic license, and wherein the electronic license [[that]] identifies two or more software commands, which are features of the software product, for registration with the software product, and wherein the electronic license includes for each software command a string identifying a command name for that particular software command and an inclusion or an [[and]] exclusion identifier, and wherein the string is embedded and included within the electronic license, classified in class 705, subclass 51.

II. Claims 15-21, drawn to a method for licensing external processes on a server comprising the steps of: generating an electronic license, wherein the electronic license is generated by formatting a customer order for a software product in accordance with a licensing schema and the formatted electronic license to include a plurality of software command directives embedded within the formatted electronic license to indicate whether a particular software command directive associated with a particular feature of the software product is to be accepted for registration or rejected for registration, and wherein each software command

directive includes a command name associated with a particular software command or operation of the software product and an inclusion or exclusion identifier for indicating the acceptance or rejection of [[the]] registration for that particular software command or operation within the software product, and wherein at least one software command for the software product is associated with the exclusion identifier, classified in class 705, subclass 51.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as generating an electronic license by formatting a customer order for a software product in accordance with a schema for the electronic license, and wherein the electronic license [[that]] identifies two or more software commands, which are features of the software product, for registration with the software product, and wherein the electronic license includes for each software command a string identifying a command name for that particular software command and an inclusion or an [[and]] exclusion identifier, and wherein the string is embedded and included within the electronic license. Invention II has separate utility such as conducting a business enterprise according to a certain method. Invention III has separate utility such as generating an electronic license, wherein the electronic license is generated by formatting a customer order for a software product in accordance with a licensing schema and the formatted electronic license to include a plurality of software command directives embedded within the

Art Unit: 3694

formatted electronic license to indicate whether a particular software command directive associated with a particular feature of the software product is to be accepted for registration or rejected for registration, and wherein each software command directive includes a command name associated with a particular software command or operation of the software product and an inclusion or exclusion identifier for indicating the acceptance or rejection of [[the]] registration for that particular software command or operation within the software product, and wherein at least one software command for the software product is associated with the exclusion identifier. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
